

THE SPIRIT OF WATER AQUA-SCIENCE-CENTRE

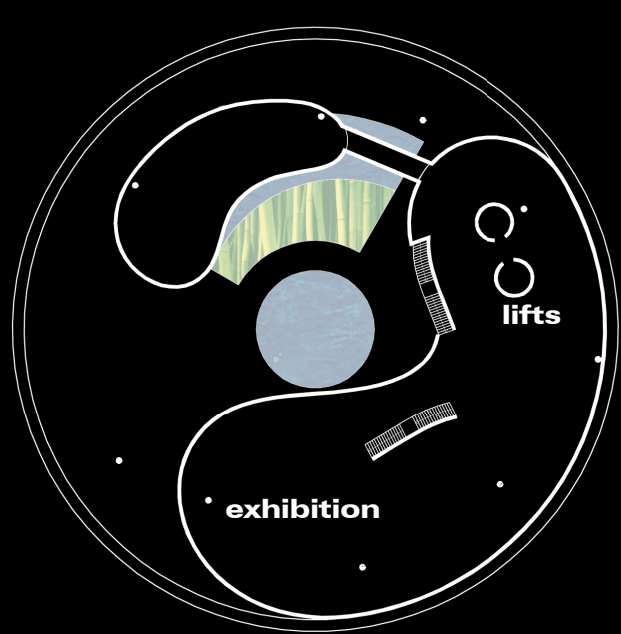

WATER - a global task

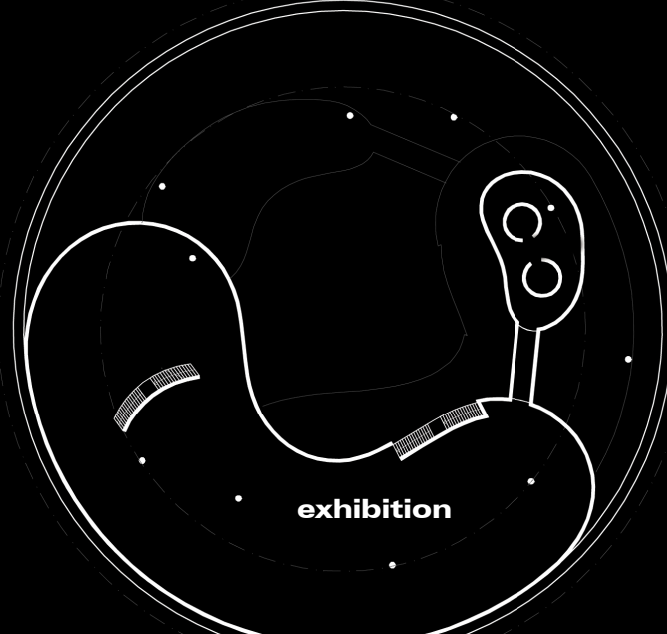

As all life has evolved in water, mankind is elementarily and inseparably connected with WATER. Simply the fact that only 0,77% of global water is available for life shows the great significance of this medium. As known the global water consumption is

doubled every 20 years it is important to discuss the meaning of water in future times. Fighting for oil in recent times water will be the most required good on earth. Our concept of Xi AQUA-SCIENCE-CENTRE is guided by the consideration of connecting one of the most important rivers in Europe - the river Rhine - with Karlsruhe, Germany's leading city in science and technology.
